

EDRMS-as-a-Service

Powered by HPE Content Manager
for Australian Government

Manage your documents and records securely in the iCognition Content Vault, and get on demand access on any device. We provide EDRMS-as-a-Service using HPE Content Manager (formerly HP Records Manager/TRIM), optionally including our **multi-award winning RM Workspace** to increase usability, collaboration and accessibility.

We will provision the infrastructure, copy your data into the cloud, optionally upgrade a pre-existing HPE system, connect your users to it, optionally with managed system and records management services. We will ensure the system is available 99.95% 24x7x365 and maintain a help desk and support services to meet your requirements.

iCognition Content Vault

Your content.
Our certified* and secure cloud.
Featuring easy-to-use EDRMS.
Managed to your standards.

iCognition Content Vault is hosted on Vault Systems Certified Government Community Cloud. Vault Systems is an Australian company that delivers fully compliant, risk assessed, ASD and IRAP certified cloud to Australian federal, state and local government agencies and their partners.

We can easily transition you to the cloud and include any additional business consulting, data migration, integration, and strategic consulting services. As a HPE Software Partner we also provide additional ongoing system upgrades and application management services using our strong skills and experience in records management, EDRMS and HPE.

Join our cloud clients by moving your content management to a simple per-user-per-month cost, and simplify your IT and records management service provision.
